```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

BD177603 1683 bp DNA linear PAT 16-APR-2003

When the use of factor VII activating protease mutant and specific antibody.

BD177603 130014865

BD177603 1 G1:30014865

TP 2002291486-A/2.

Homo sapiens

Bukaryota, Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Butheria; Primates; Catarrhini; Hominidae; Homo.

Bookses 1 to 1683)

Roemisch, J. Stoehr, H.A., Feussner, A., Lang, W., Weimer, T., Becker, M., Nerlich, C. and Naumann, G.M.

Detection method with the use of factor VII activating protease mutant and specific antibody.

NEDO cDNA sequencing project supported by Ministry of Economy,

Trade and Industry of Japan; CDNA full insert sequencing: Research

Association for Biotechnology (RAB); ODNA ilbrary construction:

Helix Research Institute (HRI) (supported by Japan Key Technology

Center etc.); 5'- & 3'-end one pass sequencing: RAB, HRI, and

Biotechnology Center, National Institute of Technology and

Evaluation; clone selection for full insert sequencing: HRI and

RAB; annotation: HRI and RAB.

Thors: Clone was sequenced in 1996 using Multiplex DNA Sequencing

T Pechnology. Data may contain low quality seq uence and BAC/Cosmid

vector sequences.

T NoTE: This is a "working draft' sequence. It currently

* NOTE: This is a "working draft' sequence. It currently

* Consists of 1 contigs Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* the accession number will be preserved.

**NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

**This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

**This sequence will be preserved.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC The present invention relates to a mutant of the DNA sequence encoding the processes (FSAP) that activates blood coagulation factor VII (FVII) CC and single-chain plasminogen activator, where at least one of the base CC changes G to C at nucleotide 1177 and G to A at nucleotide 1601 is CC blood coagulation sequences can be used in the treatment and prevention CC blood coagulation factors V, VIII, IX, X, XI, XII, von Willebrand's CC blood coagulation factors V, VIII, IX, X, XI, XII, von Willebrand's CC sequence is the human FSAP coding squence CC sequence 1683 BP; 440 A; 436 C; 437 G; 370 T; 0 U; 0 Other; Query Match Query Match Rest Local Similarity 100.0%; Score 1683; DB 6; Length 1683; Best Local Similarity 100.0%; Pred, No. 0; Namanches 1683; Onservative 0; Masmatches 0; Indels 0; Gaps 0;	1 1 2 1 1 1	121 CAGTATGAGATACAGAGATTATAATCAGGAAGAACACCAGTAGCACTTACC 181 CATGCTGAGAATCCTGACTGAGTGACTCAGGAAGAACACCAGTAGCACTTACC 181 CATGCTGAGAATCCTGACTGATTATAATCAGGACCAAGCTGATCCATGCCAGCCCAAC	241 CCCTGTGAACACGGTGGGGACTGCCTCGTCCATGGGAGCACTTCACATGCAGGTGCCTG 301 GCTCCTTTCTCTGGGAATAAGTGTCAGAAAGTGCAAAATACGTGCAAGGACGACGAACCATGT 10	Qy 361 GGCGGGGGCCAATGTCTCATTACCCAGGTCCTCCTACTACTGTCTGT	QY 481 AATGGGGCTACCTGCTCCCGGCATAAGCGGAGATCCAAGTTCACCTGTGCCTGTCCCGGC 540 Db 481 AATGGGGCTACCTGCTCCCGGCATAAGCGGAGATCCAAGTTCACTGTGCCTGTCCGGAC 540 QY 541 CAGTTCAAGGGGAAATTCTGTGAAATAGGTTCTGATGACTATGTTGGCGATGGCTAC 600 Db 541 CAGTTCAAGGGGAAATTCTGTGAAATAGGTTCTGATGACTACTTGTGGCGATGGCTAC 600	OY 601 TCTTACCGAGGGAAATGAATGACAGTCAACCAGCATGCGTGCCTTTACTGGAACTCC 660 	Oy 661 CACCTCCTTGCAGGAGAATTACAACATGTTTATGGAGGATGCTGAAACCCATGGGATT 720	781 GTTACCAATACAAGGGAAATACGGAATACTGTGATGCTCAGGCTGCTCAGGACCAGGAC

                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatocropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/published_pot_sequences
                                                                                                                                                                                                                                                                                    Diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumor in a patient, involves detecting the level of expression of two or more genes in a liver tissue sample.

Nucleic acid sequences differently expressed between hepatoblastoma and normal liver tissue, are useful for cancer detection and diagnosis.

Claim 4; Page 142-144; 180pp; Japanese.

The present invention describes mucleic acid sequences (I) having a different degree of expression in hepatoblastoma from their expression in concurrent issue. ACC51116 to ACC51219 represents specifically claimed examples of (I). Also described: (I) nucleic acids stringently camed examples of (I). Also described: (I) nucleic acids stringently or more of hybridising to (I); (2) cancer detection probes containing one or more of configuration of the concertain sequences derived from them; (3) sea ACC51116 to ACC51219, including the 79 (I, sea ACC51116 to ACC51194), or partial sequences (II); (4) marker or proteins for cancer detection, encoded by (II); (5) diagnostic reagents or cancer diagnosis, containing (II) or their partial sequences. The nucleic acid sequences are useful in the detection and diagnosis of cancers including liver, colon, breast, kidney, bladder, overy and thyroid cancer, especially for hepatoblastoma, hepatocellular carcinoma, hereditary non-polyposis colorected cancer, desmoid tumour, anaplastic thyroid carcinoma and Wilm's tumour. They are also used as markers for predicting the prognosis of these tumours, ACC51220 to ACC51231 represent PCR primers used in the exemplification of the present invention. The nucleic acid sequences given in ACC51116 to ACC51219 are related to human or ply-1 (polo-like kinase-1), which is located on chromosome 16p12

Ξ Becker WPI; 2002-270939/32. P-PSDB; AAO17145.

The present invention relates to a mutant of the DNA sequence encoding the protease (FSAP) that activates blood coagulation factor VII (FVII) and single-chain plasminogen activator, where at least one of the base changes G to C at nucleotide 1177 and G to A at nucleotide 1601 is present. The mutant sequences can be used in the treatment and prevention of bleeding disorders associated with inherited or acquired defects of blood coagulation factors V, VIII, IX, X, XI, XII, von Willebrand's factor and/or with antibodies against any of these proteins. The present sequence is the mutant human FSAP coding squence SX CCCCCCCCXXXX T T X X B X X B X X B X X B X X B X X B X X B

which represent the human ORFX open reading frames 1 to 3161. The ORFX which represent the human ORFX open reading frames 1 to 3161. The ORFX acquences have activities such as: oytostatic; hepatotropic; vulnerary; antipacriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; deradiant; thrombolytkic; coagulant; vasotropic; antidiabetic; hypotensive; dermacological; immunosuppressive; antinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antinflammatory; antibacterial; acquences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX

```
AAA43426 to AAA45925 represent specifically claimed secreted expressed sequence tags (BESTS), isolated from human, mouse, chicken and rat tissue conscrees. The SESTS can have a range of activities depending on the tissues they were isolated from. The activities include: chemotactic; proliferative; immunomodulatory; haematopoietic; chemotactic; analgesic; nationally antifungal; antivital; antidiabetic; antiasthmatic; vulnerary; antibacterial; antifungal; antivital; antidiabetic; antiasthmatic; vulnerary; antibacterial; costeopathic; neuroprotective; notropic; antidepressant. The SESTS can be used for gene therapy and in vaccines. The SESTS are useful as probes for the identification and isolation of full-length cDNAs and genomic DNA conceptor and isolation of full-length cDNAs and genomic DNA contibuted in assays for determining biological activity and raising antible sclerosis, insulin dependent diabetes), altergic conditions (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, osteoprosis, osteoarthritis, central nervous system disorders (Alzheimer's Parkinson's, Huntington's disease, stroke), coagulation disorders (disorders (haemophilia, thrombosis), inflammatory disorders (Crohn's coarlasts, AAA45926 to AAA45931 represent invention continue.)
thrombolytic, antiinflammatory; cytostatic; antibacterial; antifungal; antiviral; antidabelic; antiasthmatic; vulnerary; antiparkinsonian; antiuler: osteopathic; neuroprotective; nootropic; antipasriatic; cerebroprotective; anticonvulsant; antidepressant; gene therapy; vaccine; autoimmune disorder; multiple sclerosis; allergic condition; insulin dependent diabetes; asthma; myeloid cell deficiency; ulcer; lymphoid cell deficiency; burn; osteoporosis; osteoarthritis; parkinson; disease; Huntington's disease; stroke; parkinson; disease; thrombosis; inflammatory disorder; Crohn's disease; tumour; infection; depression; psoriasis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Isolated polynucleotides, and encoded proteins, comprising secreted expressed sequence tags (SESTs), useful for treating various disorders such as autoimmune, infectious, and central nervous system disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Collins-Racie LA,

cDNA libraries, useful chromosome and gene or in generating New polynucleotide sequences obtained from various as hybridization probes, as oligomers for PCR, for mapping, in the recombinant production of protein, antisense DNA or RNA.

Claim 1; SEQ ID NO 8242; 44pp; English

The invention relates to an isolated polymucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH5081, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polymetride comprising a sequence corresponding to a reading frame of the novel polymucleotide. The nucleic acid sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               298
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              358
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             418
are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensits, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antibodies specific for it. The purified polypeptide is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was sequence. Useful and in electronic format directly from USPTO at sequence. Language obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                                                                                                                                                                                             180

The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compression profile of particular genes (ABI95020 to ABI99912, encoding the expression profile of a gene group comprising these genes. The expression profile of a gene group comprising these genes are used as an levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases. ABI99913 and ABI99914 represent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1542

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and siplaying gene expression in aamples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     324 TCAGAAAGTGCAAAATACGTGCAAGGACAACCCATGTGGCCGGGGCCAATGTCTCATTAC 383

Claim 25; SEQ ID NO 6633; 654pp; English

gene expression in human placenta

The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for prodicting a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders

                                                                                                                     The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention
                                                                                                                                                                                                                                                                       ö

                                               The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the

measuring human gene expression in a sample derived from human adult liver. comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABS25011-ABS51005 represent human liver single exon nucleic acid probes of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at

ů set of single exon nucleic acid probes, used measure gene expression in human lung samples.

Claim 1; SEQ ID NO 6854; 634pp; English.

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from thum lung comprising single exon nucleic acid probes having one of Iron human lung comprising the specification, or their complements or the 12387 open reading frames derived from the 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 nucleic acid expressed in the human lung; measuring spee expression in a sample collection of detectably labeled nucleic acids derived from human lung; measuring spee expression in a sample collection of detectably labeled nucleic acids derived from human lung and the label detectably bound to each probe of the carry; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of algorithmically predicting at least one exon from genomic sequences of the enkaryote; and (b) detecting specific hybridisation of detectably, the above mentioned microarray; assigning exons to a single exon probe, in the above mentioned microarray; assigning exons to a single exon probe of the exons such the expression of each of the exons in the tissues and/or cell types using hybridisation to a single exon microarray bring a probe with the expression of each of the exons in the tissues and/or cell types using hybridisation to a single exon compression of the exons in the tissues and/or cell types indicates that expression of the exons in the tissues and/or cell types indicates that carryession of the exons should be assigned to a single gene; a peptide comprising one callysis, and for identifying exons in a gene, particularly using human lung derived manyas, and for the erudy of lung diseases such as asthma, under constructive pulmonary disease such as asthma, lung cancer, chronic obstructive pulmonary diseases such as asthma, lung derived manyas, gauchers of sisease (IDD), familial iddopathic pulmonary abrolar pa Karagener syndrome, fibrocystur, pulmonary dysplasis, primary ciliary dyskinesis, pulmonary hypertension and hyaline membrane disease. The present sequence is a single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO ftp.wipo.int/pub/published_pct_sequences

**Notestable to the property of the processing by the pancrasic bud, Elb. 5 pancrasic bud, Elb. 5 pancrasic bud, Elb. 5 pancrasic bud, Elb. 5 pancrasic bud, Elb. 5 pancrasic bench pancras, adult pancras, and adult islets of Langerhams were seperately constructed using SuperScript Plasmid Library kit (Life Technologies). CDNA was made by oligo-dT priming and size-selected by column fractionation. Libraries were amplified once on solid support and plasmid DNA from each library DNA was normalized by method #4 from Bonaldo, Lennon, and Soares 1996 Genome Research 6:791-806, 0.5 microgram single-stranded mixed library plasmid DNA was mixed in pancy plasmid DNA was mixed inserts and hybridized to an Ecto of 6. Single-stranded (unhybridized) plasmids were isolated by hydroxyapatite chromatography and used to make this library.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1228 AATGATATTGCATTGCTCAAGTTAAAGCCAGTGGATGGTCACTGTGCTCTAGAATCCAAA 1287

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 2, Al

Patent NO. 5466593

GENERAL INFORMATION:

APPLICANT: Takeshi SHIMOMURA et al.

APPLICANT: Takeshi SHIMOMURA et al.

TITLE OF INVENTION: NO. 546659381 Protein and Gene Encoding Said Protein

NUMBER OF SEQUENCES: 14

CORRESPONDENCE ADDRESS:

ADDRESSEE: Wenderoch, Lind & Ponack

STREET: 805 Fifteenth Street, N.W., #700

STREET: D.C.

COUNTRY: U.S.A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         IMMEDIATE SOURCE:
